Abstract

An Internet-Spanning Content Distribution Mechanism for IoT

by

Griffin Potrock

Master of Science in Electrical Engineering and Computer Science

University of California, Berkeley

Professor John Kubiatawicz, Chair

Low-cost, Internet-connected devices are rapidly proliferating in a computing mega-trend known as the Internet of Things (IoT). While the IoT offers great opportunities, from smart cities to smart homes, it also offers many new computing challenges. These challenges include handling larger numbers of devices; handling more upstream and inter-device communication; and managing the secure storage and distribution of rapidly increasing amounts of data.

The Global Data Plane (GDP) project seeks re-architect the networking infrastructure of the Internet to accommodate these trends. The GDP relies on replicated, append-only logs. In addition to being a durable data store, these logs are often used as a single-writer publish/subscribe mechanism.

This thesis proposes new mechanisms for adapting publish/subscribe to the networking challenges of IoT. We detail design choices for a new overlay-based multicast system that are both novel and thoroughly grounded in existing literature and experience to ensure viability. We also propose new, scalable mechanisms for providing reliability in such a system. While our evaluation focuses on demonstrating the viability of our multicast architecture and reliability mechanisms through simulations, we also include discussions on security and deployment.

Chapter 1

Introduction

1.1 Background

The Internet of Things is a computing macrotrend poised to change the way we interact with the computing environments and reshape the Internet. While the push toward cloud computing has lead to increasing centralization of the Internet into a handful of data centers, the proliferation of IoT devices is pushing computation and data flows back toward the network edge.

IoT applications may be worth up to \$11 trillion by 2025. However, 40% of this value relies on coordination between IoT systems [McKinsey].
